Experiments10 Vi Editor and Utility

Open Source SW Development CSE22300

version 1.1 April 1st, 06 vi / vim 단축키 모음 Esc 명령 모드 & 변복 다음 검색 **70**显显数 첫 글자 전환 명령 줌 주요 명령행 명령 ('ex'): H서를 이동하거나, 연산자가 E작할 범위를 지정합니다. :w (저장), :q (종료), :q! (저장하지 않고 종료) (1) 복사/분여넣기/지우기 명령어를 사용하기 전에 "x를 입력하여 레지스터(클립보드)를 지정하세요. (x는 a에서 2 또는 ' 을 사용할 수 있음) (예: 'ay') 을 입력하면 현재 커서에서 라인 끝까지의 내용을 레지스터 'a'에 :%s/x/y/g (파일 전제에서 'x' 을 'y' 로 교제), 빨간색은 편집 모드로 변경됩니다. :h (vim 도움말), :new (새 파일) 이동 관련 문자(숫자나 커서 이동)와 함께 사용하여야 하며, 커서의 위치부터 목적지까지 연산합니다. 저장합니다.) 연산자 그외 중요한 명령들: (2) 어떤 명령을 입력하기 전에 횟수를 지정하면, 횟수만큼 반복하게 됩니다.(예: 2p, d2w, 5l, d4l) CTRL-R: 재실행 (vim), CTRL-F/-B: 페이지 위로/아래로, CTRL-E/-Y: 줄 스크롤 위로/아래로, 특별한 키 함수로, 추가적인 키 입력이 필요합니다. (3) 연속으로 입력하는 명령은 현재의 라인에 반영됩니다. 예시: dd(현재 라인 지우기), >>(들여쓰기) 확장 CTRL-V: 블럭-비주얼 모드 (vim 전용) 입력후 (숫자를 제외한 .으로 끝날수 있는) 글자를 입력하여야 합니다. (4) ZZ 는 저장후 종료, ZQ는 저장하지 않고 종료. 비주얼 모드: (5) zt : 커서가 위치한 곳을 제일위로 올리기, zb : 바닥으로, zz : 가운데로 words: 구분자로 공백, 특수기호 모두 사용 커서를 움직여 지정한 범위에 연산자를 WORDs: 구분자로 공백 문자만 사용 적용합니다. (vim 전용) (6) gg: 파일의 처음으로(Vim 전용). words: quux (foo, bar, baz); gf: 커서가 위치한 곳의 파일 열기(Vim 전용) WORDs: quux (foo, bar, baz); vi/vim 에 대한 더 많은 강좌나 팁을 얻으려면 www.viemu.com (ViEmu, MS 비주얼 스튜디오를 위한 vi/vim 에뮬레이션)을 방문하십시오.

Vi

- The editor on the Unix.
- Before vi the primary editor used on Unix was the line editor
 - User was able to see/edit only one line of the text at a time
- The vi editor is not a text formatter (like MS Word, Word Perfect, etc.)
 - you cannot set margins
 - center headings
 - Etc...

Characteristics of Vi

- The vi editor is:
 - a very powerful
 - but at the same time it is cryptic
 - It is hard to learn, specially for windows users
- The best way to learn vi commands is to use them
- So Practice...

Vim equals Vi

- The current iteration of vi for Linux is called vim
 - Vi Improved
 - <u>http://www.vim.org</u>

- Starting vi
 - Type vi <filename> at the shell prompt

Vi Modes

- There are two modes in vi
 - Command mode
 - Input mode
- When you start vi by default it is in command mode
- You enter the input mode through various commands
- You exit the input mode by pressing the Esc key to get back to the command mode

How to Exit From Vi

- First go to command mode
 - Press Esc
 - There is no harm in pressing Esc even if you are in command mode
 - Your terminal will just beep and/or or flash if you press Esc in command mode
- There are different ways to exit when you are in the command mode

How to Exit from Vi (Command Mode)

- :q <enter> is to exit, if you have not made any changes to the file
- :q! <enter> is the forced quit, it will discard the changes and quit
- :wq <enter> is for save and Exit
- :x <enter> is same as above command
- ZZ is for save and Exit (Note this command is uppercase)
- The! Character forces over writes, etc.:wq!

- You can move around only when you are in the command mode
- Arrow keys usually works(but may not)
- The standard keys for moving cursor are:
 - h for left
 - l for right
 - j for down
 - k for up

- (minus) moves the cursor to the first character in the current line
- H takes the cursor to the beginning of the current screen(Home position)
- L moves to the Lower last line
- M moves to the middle line on the current screen

-) moves cursor to the next sentence
- } move the cursor to the beginning of next paragraph
- (moves the cursor backward to the beginning of the current sentence
- { moves the cursor backward to the beginning of the current paragraph
- % moves the cursor to the matching parentheses

- Control-d scrolls the screen down (half screen)
- Control-u scrolls the screen up (half screen)
- Control-f scrolls the screen forward (full screen)
- Control-b scrolls the screen backward (full screen).

Entering text

- To enter the text in vi you should first switch to input mode
- To switch to input mode there are several different commands
- a Append mode places the insertion point after the current character
- i Insert mode places the insertion point before the current character

Entering text

- I places the insertion point at the beginning of current line
- o is for open mode and places the insertion point after the current line
- O places the insertion point before the current line
- R starts the replace(overwrite) mode

Entering text

- x deletes the current character
- d is the delete command but pressing only d will not delete anything you need to press a second key
- dw deletes to end of word
- dd deletes the current line
- d0 deletes to beginning of line
- There are many more keys to be used with delete command

Structure of vi command

- The vi commands can be used followed by a number such as
- n<command key(s)>
 - For example, dd deletes a line 5dd will delete five lines.
- This applies to almost all vi commands
- This how you can accidentally insert a number of characters into your document

Undo and repeat command

- u undo the changes made by editing commands
- . (dot or period) repeats the last edit command

Copy, cut and paste in vi

- yy (yank) copy current line to buffer
- nyy Where n is number of lines
- p Paste the yanked lines from buffer to the line below
- P Paste the yanked lines from buffer to the line above

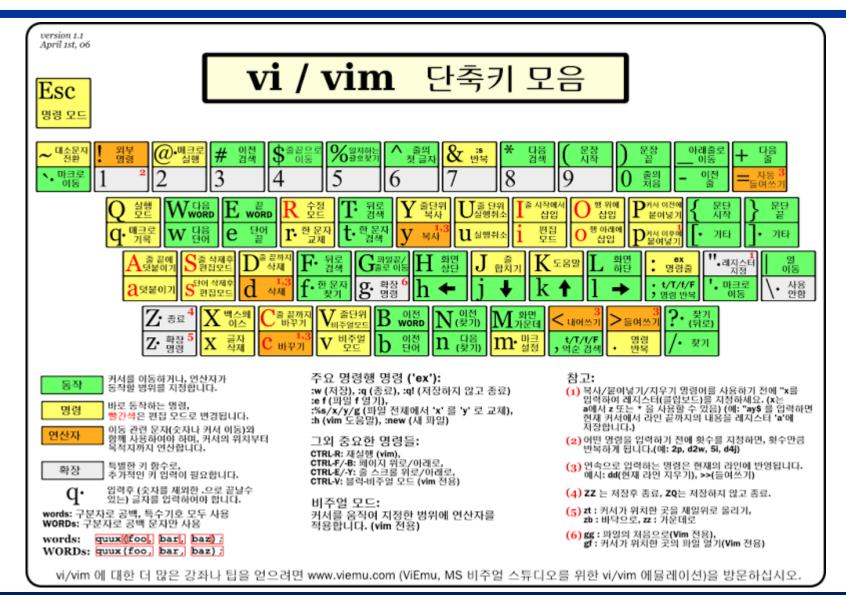

Searching for a String

- /pattern search for pattern (forwards)
- ?pattern search for pattern (backwards)
- n repeat last search
- :%s/old/new/g replace every occurrence of old with new in entire file

Stupid vi Tricks

- Indent four lines: 4>>
- Will delete the character under the cursor, and put it afterwards. In other words, it swaps the location of two characters: xp
- Similar to xp, but swapping lines: ddp
- Remove all lines that start with #
- :g/^#/d
- Remove all empty lines, assumes no spaces or tabs:
- :g/^\$/d

Shortcut

Assignment01

Practice with this script

I am happy to join with you today in what will go down in history as the greatest demonstration for freedom in the history of our nation.

Five score years ago, a great American, in whose symbolic shadow we stand today, signed the Emancipation Proclamation. This momentous decree came as a great beacon light of hope to millions of Negro slaves who had been seared in the flames of withering injustice. It came as a joyous daybreak to end the long night of their captivity.

But one hundred years later, the Negro still is not free. One hundred years later, the life of the Negro is still sadly crippled by the manacles of segregation and the chains of discrimination. One hundred years later, the Negro lives on a lonely island of poverty in the midst of a vast ocean of material prosperity. One hundred years later, the Negro is still languished in the corners of American society and finds himself an exile in his own land. And so we've come here today to dramatize a shameful condition.

In a sense we've come to our nation's capital to cash a check. When the architects of our republic wrote the magnificent words of the Constitution and the Declaration of Independence, they were signing a promissory note to which every American was to fall heir. This note was a promise that all men, yes, black men as well as white men, would be guaranteed the "unalienable Rights" of "Life, Liberty and the pursuit of Happiness." It is obvious today that America has defaulted on this promissory note, insofar as her citizens of color are concerned. Instead of honoring this sacred obligation, America has given the Negro people a bad check, a check which has come back marked "insufficient funds."

- Run vi (vi speech.txt)
- Entering input mode (i)
- Paste the script
- Practice

Utility

man

Display manual of command

```
linux@linux-VirtualBox: ~
                                                  User Commands
                                              LS (1)
LS (1)
NAME
       ls - list directory contents
SYNOPSIS
       ls [OPTION]... [FILE]...
DESCRIPTION
       List information about the FILEs (the cur□
       rent directory by default). Sort entries
       alphabetically if none of -cftuvSUX nor
       --sort is specified.
       Mandatory arguments to long options are
page ls(1) line 1 (press h for help or q to quit)
```

Date

Print or set the system date and time

```
linux@linux-VirtualBox: ~
linux@linux-VirtualBox:~$ date
2016. 09. 18. (일 ) 17:19:37 KST
linux@linux-VirtualBox:~$
```

WC

Print newline, word, and byte counts for each file

```
linux@linux-VirtualBox: ~
linux@linux-VirtualBox:~$ wc examples.desktop
      569 8980 examples.desktop
linux@linux-VirtualBox:~$
```

more

- Displays the entire contents of a file one page at a time
 - Spacebar moves through file one page at a time
 - Enter key moves through file one line at a time
 - Only moves forward through a file, not backward
 - Exit: q
 - Example 1: more lab1.txt

more

```
linux@linux-VirtualBox: ~
[Desktop Entry]
Version=1.0
Type=Link
Name=Examples
Name[aa]=Ceelallo
Name[ace]=Contoh
Name[af]=Voorbeelde
Name[am]=ምሳሌዎች
Name[an]=Exemplos
أمثلة=[ar]Name
Name[ast]=Exemplos
Name[az]=Nümunələr
Name[be]=Прыклады
Name[bg]=Примери
Name[bn]=উদাহরণ
linux@linux-VirtualBox:~$ more examples.desktop
```

less

- Nearly equivalent to the more command
 - Allows you to move forward and backward in the file

Usage: same as more

```
linux@linux-VirtualBox: ~
                                                   Type=Link
Name=Examples
Name[aa]=Ceelallo
Name[ace]=Contoh
Name[af]=Voorbeelde
Name[am]=ምሳሌዎች
Name[an]=Exemplos
أمثلة=[ar]
Name[ast]=Exemplos
Name[az]=Nümunələr
Name[be]=Прыклады
Name[bg]=Примери
Name[bn]=উদাহরণ
linux@linux-VirtualBox:~$ less examples.desktop
linux@linux-VirtualBox:~$ less examples.desktop
linux@linux-VirtualBox:~$
```

head

Displays just the first ten lines of a file

```
linux@linux-VirtualBox: ~
                                                    linux@linux-VirtualBox:~$ head examples.desktop
[Desktop Entry]

Input and Output Redirection

- Redirecting the input:
 - command < filename</p>
 - Any input will read from that file (must be file).
- Redirecting the output
 - The simple > rewrites the output file
 - The double one >> appends to the file (must be file).
- command > filename
- command >> filename
- wc < examples.desktop > output.txt

Input and Output Redirection

```
linux@linux-VirtualBox:~$ wc < examples.desktop > o
utput.txt
linux@linux-VirtualBox:~$ cat output.txt
240 569 8980
linux@linux-VirtualBox:~$
```

Compressing Files

- Tar, gzip, gunzip
- tar
 - compress several files (directories) into one archive.
 - Options: cf for compressing, xf for decompressing.
 - Example: tar –cf examples.desktop.tar examples.desktop
- gzip
 - Compresses one file at a time.
 - Options: none to compress, -d to decompress.
 - Example: examples.desktop.tar

Compressing Files

Assignment02

- Prints word counts of files located in current directory
 - Hint: wc
- Compress a folder without using gzip
 - Hint: tar
- Sort all of files based on word count
 - Hint: wc and pipe
- Sort files in current directory based on file size
 - Hint: sort
- Print all of files containing "test" with ignoring case
 - Test, TEST, TeST, TESt
 - Hint : grep
- Prints all of files containing "test" in all directories
 - Hint : grep

Assignment03

- Find all empty directories
 - Hint: find
- Find all of the files older than 7 days
 - Hint: find
- Remove all of the files older than 7 days
 - Hint: find
- Find files between 1MB and 2MB size
 - Hint: find
